Mockup 5 of 5 · Control Room

A Stay and grow | B Go full-time | C Qualify up

Naledi's decision: leave my payroll job to run my catering business full-time

SAVINGS AT MONTH 36

R420 200

Likely case for path A. Starts at R35 000 today.

EMERGENCY CUSHION REACHED

Month 4	Month 1	Month 1
Bad case	Likely case	Good case

RUNWAY TODAY

2 months

R35 000 covers essentials, family support and debt for about 2 months.

WORST SETBACK

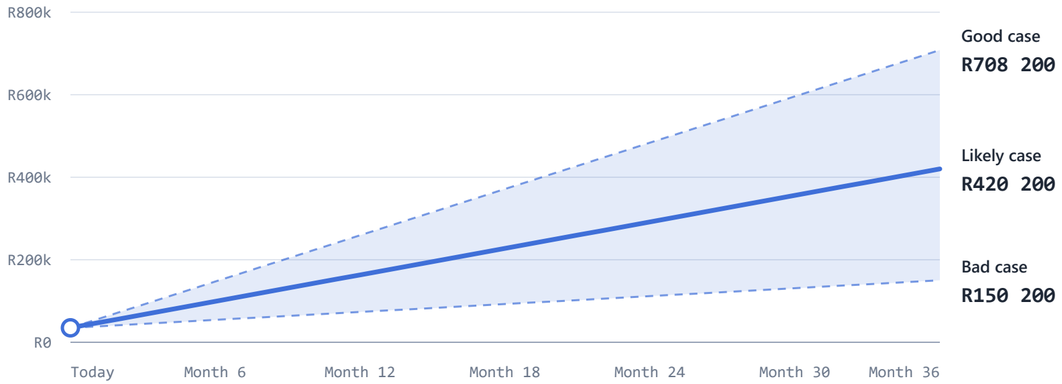

−R39 000

Income gap: salary stops for a couple of months.

Savings over 36 months

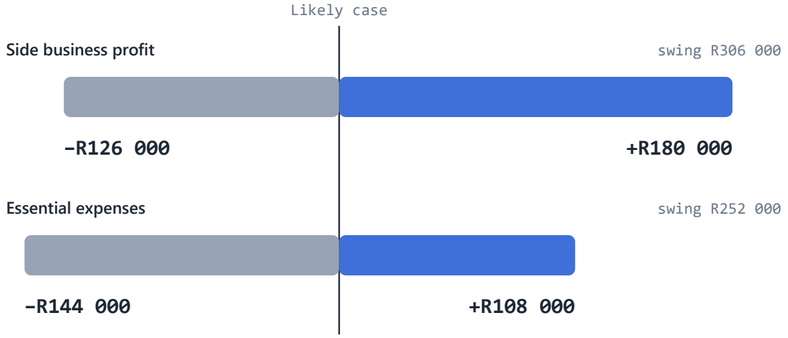

Likely case | Bad to good

Path A. The shaded band runs from the bad case to the good case; the solid line is the likely case.

What moves the end balance

Change in month-36 savings when one assumption moves from its low to its high value, with the rest at base.

Held fixed in this plan: take-home salary, support to family, debt repayments.

Assumptions for path A

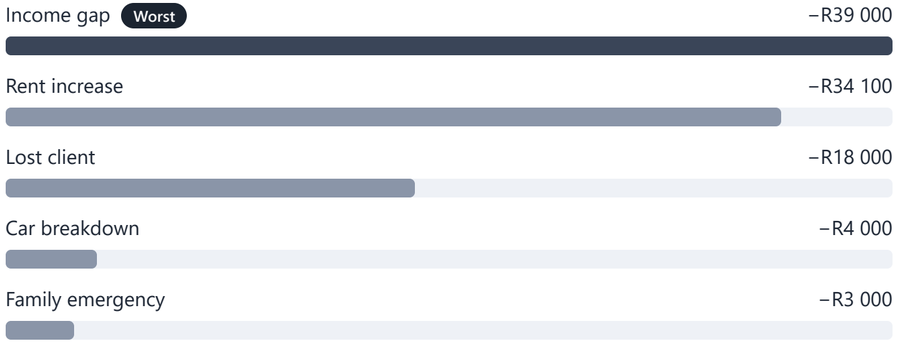

4 of 5 set by you

Low, base and high value for each assumption.

ID	ASSUMPTION	LOW	BASE	HIGH	SOURCE	
A1	Take-home salary	R19 500	R19 500	R19 500	You	Edit
A2	Side business profit	R2 500	R6 000	R11 000	You	Edit
A3	Essential expenses	R8 000	R11 000	R15 000	Default	Edit
A4	Support to family (never cut without you)	R3 000	R3 000	R3 000	You	Edit
A5	Debt repayments	R800	R800	R800	You	Edit

Setback stress test

One setback at a time. Each bar is its total cost to path A's savings, from the engine.

Not financial advice · One possible future, not a prediction

Three paths on one scale

Bars run from the bad case to the good case on the same scale, from −R500 000 to R800 000. The dot is the likely case.

	A Stay and grow	B Go full-time	C Qualify up
Savings at month 12	**R163 400** Bad R73 400 · Good R259 400	**R31 100** Bad −R97 600 · Good R222 500	**R109 400** Bad R26 000 · Good R205 400
Savings at month 36	**R420 200** Bad R150 200 · Good R708 200 	**−R64 900** Bad −R476 800 · Good R572 900 	**R409 400** Bad R114 200 · Good R750 050

Lowest balance, bad case	**R35 000** Month 0	**−R476 800** Month 36	**R21 500** Month 18
Biggest driver	**Side business profit** Swing R306 000 over the plan	**Full-time business profit** Swing R772 200 over the plan	**Essential expenses** Swing R252 000 over the plan
Worst setback	**Income gap** Costs R39 000	**Rent increase** Costs R34 100	**Income gap** Costs R39 000
The plan	*Keep the job and keep the side business going on weekends.*	*Resign after month 3 and run the business full-time.*	*Study part-time for 18 months, then earn more in the same field.*

Figures are the engine's 36-month results for each path.

Ask about the numbers

A | B | C

Ask about any path or setback. I answer from the 36-month figures.

What if the rent goes up on path B?

A rent increase takes about R34 100 from path B's savings over 36 months. Its likely case ends at −R64 900 before any setback, so a rent rise on top would take it to about −R99 000.

Show path B's bad case | Change full-time profit | Compare with path A

Checked against the 36-month figures for path B.

COMFORT CHECK

How steady does path B feel to you?

No right answer. This is not a score for the plan.

1 | 2 | 3 | 4 | 5

1 = not at all steady · 5 = very steady

What would make this feel safer? (optional)
